

# Current Flagship Consumer GPUs Report

## Current Flagship Consumer GPUs Report

This report summarizes the current flagship consumer graphics processing units (GPUs) from three major vendors: NVIDIA, AMD, and Intel. The data includes the model name, MSRP (Manufacturer's Suggested Retail Price), power consumption metrics, and launch dates, based on recent research findings.

1. NVIDIA — GeForce RTX 5090 - MSRP: \$1,999 USD (MSRP) - Power: 575 W TDP (Thermal Design Power) - Launch Date: January 30, 2025 - Sources: - MSRP: Tom's Hardware, WindowsReport - Power: TechPowerUp leak report, Notebookcheck - Launch date: Tom's Hardware, Wikipedia
2. AMD — Radeon RX 9070 XT - MSRP: \$599 USD (launch price / MSRP) - Power: 304 W TBP (Total Board Power) - Launch Date: March 6, 2025 - Sources: - MSRP: Videocardz, GamersNexus - Power: TechPowerUp, VideoCardz - Launch date: AMD press release, AMD product page
3. Intel — Arc B580 (Battlemage) - MSRP: \$249 USD (MSRP / starting price) - Power: Approximately 190 W max power draw - Launch Date: December 13, 2024 - Sources: - MSRP: Intel newsroom, GamersNexus - Power: LTT Labs, TechPowerUp GPU DB - Launch date: Intel newsroom, GamersNexus

Note: - Power values reflect reported TDP, TBP, or TGP as cited from respective sources. - Launch dates reflect availability or official launch information.

This summary encapsulates the key specifications of the latest flagship GPUs, assisting potential buyers and enthusiasts in understanding the current market offerings.

For further expansions such as details on vendor partner reference-designs, real-world retail pricing, or technical specifications (die/GPU chip names, VRAM, memory bus), additional data can be compiled upon request.
